

# Welcome to **R&D@Haleon.**

**“Our science doesn’t start with researching the next molecule. It starts with understanding people. We must get under the skin of people’s needs and motivations. Only then can we use our science to make a real difference to someone’s life”**

---

**Franck Riot**  
Chief R&D Officer

# Trusted science. Our cornerstone.

## Product Development

Microbiologists, analytical chemists, formulation, packaging engineers, project managers and stability experts work end to end to tailor new solutions to meet your local needs.

## Regulatory Affairs

Our regulatory affairs professionals work to provide access to a diverse portfolio of highly effective solutions from medicines to medical devices and supplements to cosmetics.

## Medical Affairs

The work of our in-house health professionals is trusted in many scientific publications. Together they help to deliver safe and effective solutions that more closely meet your needs.

## Consumer Safety

Pharmacovigilance experts, safety systems experts and governance and labelling experts use world-leading methodologies to help deliver health solutions that are safe, trusted and effective.

## Clinical Research

Statisticians, clinical study experts and toxicologists collaborate to ensure our solutions are rigorously researched and tested so that you can trust in them.

## Consumer & Sensory Science

Our consumer, sensory and flavour scientists welcome you to our consumer home and sensory labs so together, we can evolve our solutions and improve the quality.

# 1,400 scientists delivering better everyday health **with humanity.**

## On a global scale. Powered by local knowledge.

Our multidisciplinary team of scientists collaborate across a network of 6 R&D Global Hubs, complemented by local teams. This gives us the flexibility to innovate on a global scale whilst quickly serving the needs of our consumers in over 100 unique markets.

## Through deep human understanding.

Our science is founded on deep human understanding. Our laboratories provide state-of-the-art R&D capabilities including a comfy consumer home to be able to fine-tune our solutions to exactly what people need.

## And disruptive innovation.

From sensory and flavour labs to microbiology, new product chemistry, analytical and stability capabilities we combine our scientific expertise to solve people's unmet health needs, challenges and frustrations with disruptive innovation.

## With world leading switch capabilities. Trusted by experts.

Our world-class Rx to OTC switch team is fundamental for driving growth and making health more accessible. This specialist team enable highly effective medicines to be available over the counter.

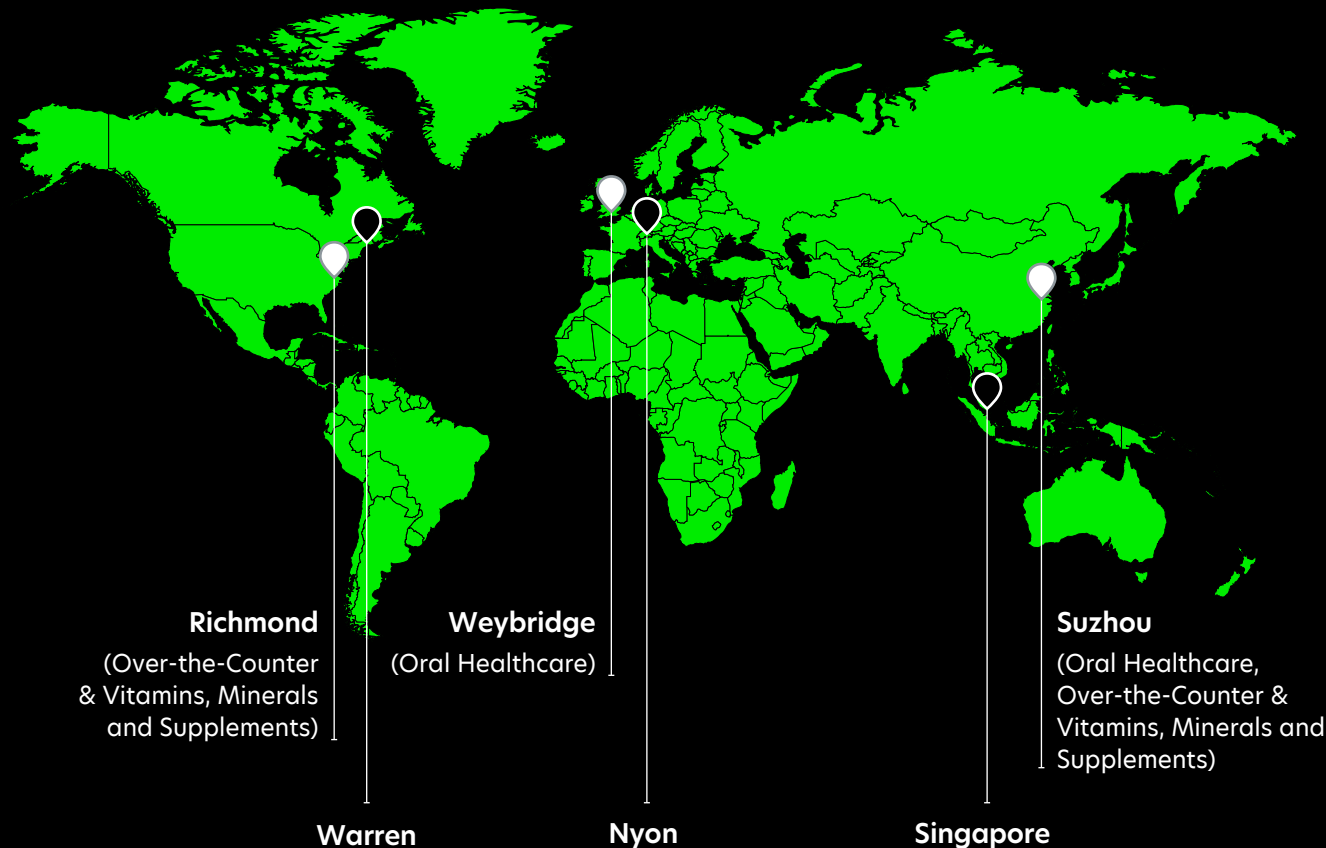

R&D@Haleon: Where we work

# Creating trusted brands across the globe.

Our 3 R&D centres of excellence are based in the UK, US and China. Together they provide the global scale to deliver locally meaningful innovation in 170 markets, improving the quality of life for millions.

**Richmond**  
(Over-the-Counter  
& Vitamins, Minerals  
and Supplements)

**Weybridge**  
(Oral Healthcare)

**Suzhou**  
(Oral Healthcare,  
Over-the-Counter &  
Vitamins, Minerals and  
Supplements)

 R&D global hubs

# HALEON

**SENSODYNE** 

#1 Brand in global value sales in the Sensitive Toothpaste category.

**Centrum** 

Backed by science, the first Centrum multivitamin hit the market in 1978.

 **Voltaren**

The world's best selling non-prescription topical pain reliever.

**ENO** 

Scientific heritage for over 120 years.

**R&D@Haleon: Who we are**

**HALEON**

# Through an inclusive and progressive culture.

We support a large number of global academic collaborations including universities, schools and PhD sponsorships.

---

We invest in a variety of STEM partnerships from The Brooklands Innovation Academy in the UK to the Cristo Rey network in the US. [Learn more here.](#)

---

We work with a diverse range of global specialist innovation partners, from packaging to next generation ingredients - ensuring our solutions are as inclusive as possible.

---

Each year we work closely with external experts to advance trusted science through advisory boards, medical forums and round tables.
